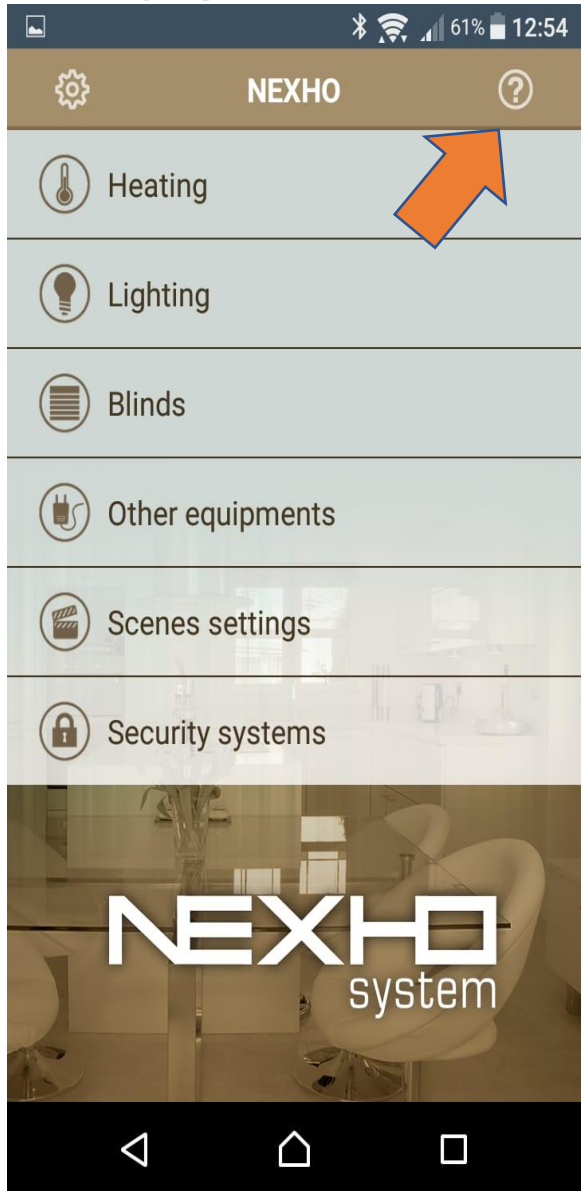
Farho NT Update

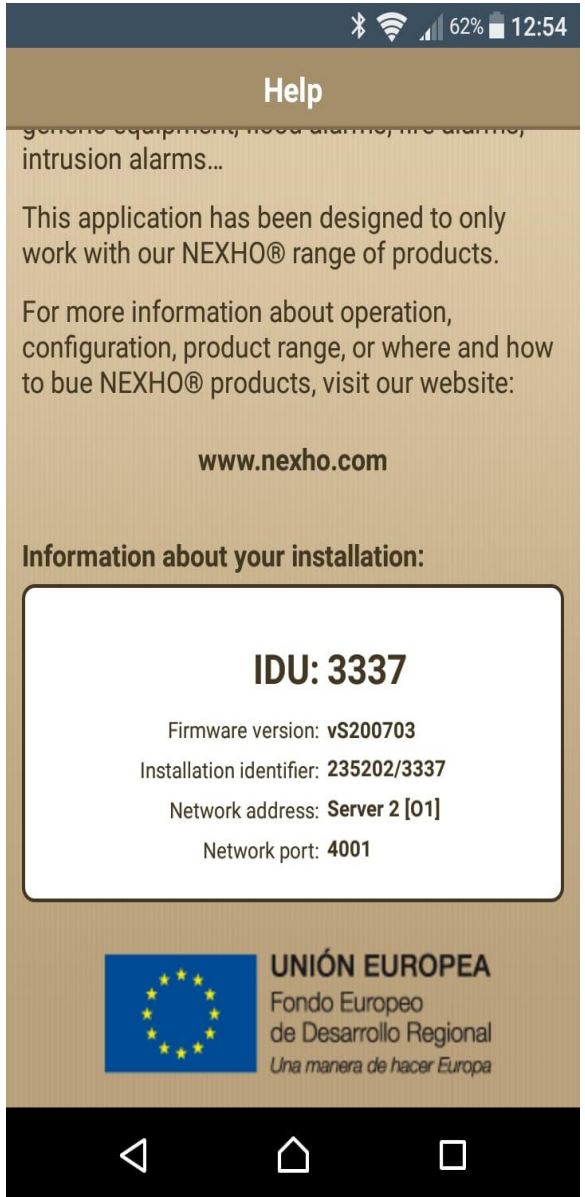
Follow the next steps previous update the unit

- Go to Farho Web and find the device you want to update.
- For example Farho NT.
- https://www.farho.com/en/producto/nt-module/
- Scroll to the bottom, click on Downloads and scroll to the bottom again.
- Choose the right firmware based on your device IDU Number *(Pre or Post 5000).
- Download the file, unzip it and leave both files in the same folder.

How to find your IDU number

- Should be written in the botom of the unit or can see it through the App, main screen, information icon.



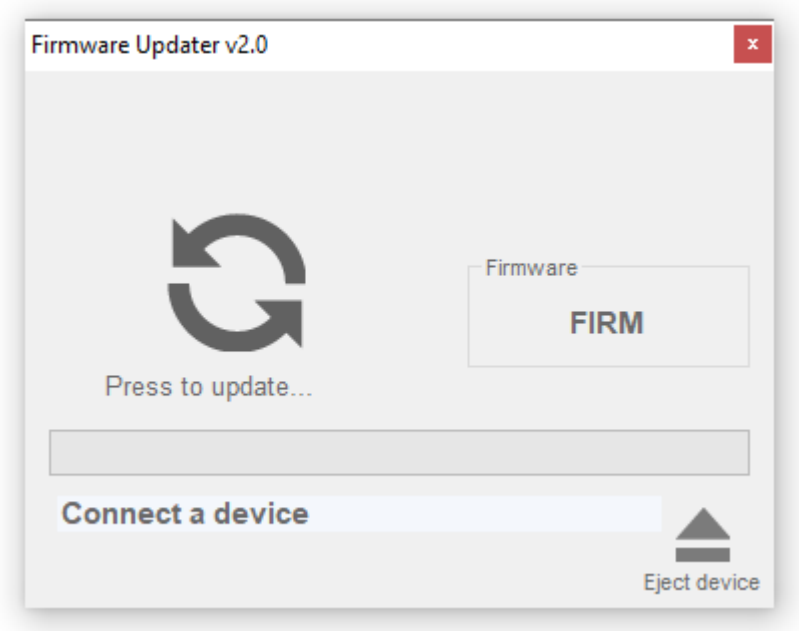


What do you need to update the module?

- The module.
- The USB cord supplied with the unit.
- PC, laptop, Microsoft no IOS.
- The location of the folder with two files that was unzip before.
- A slim tool like a clip, needle or something that allow to push the rear buttom

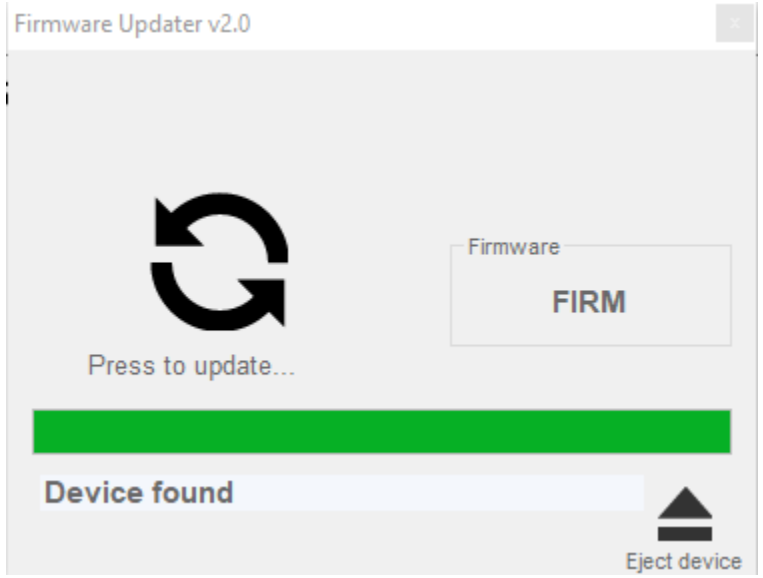
How to proceed with update?

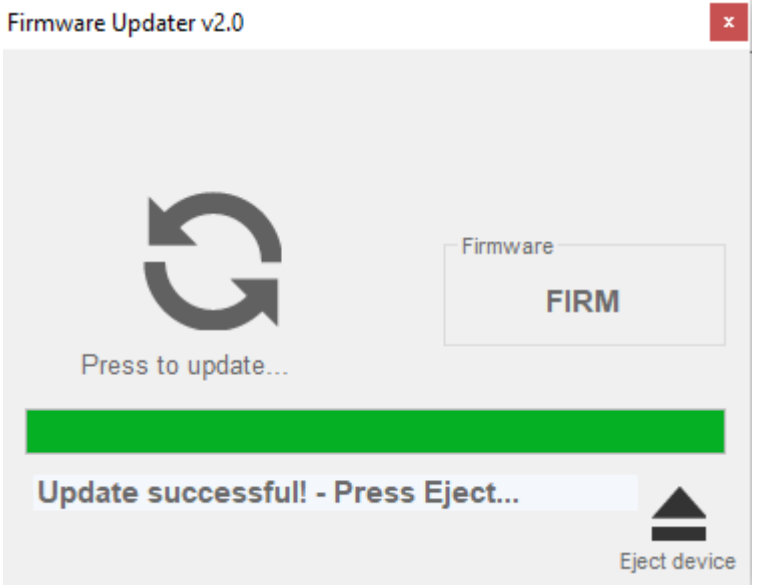
- Plug the USB into your PC or Laptop but not to the module.
- Run the file .exe from the folder you create after downloading.



With a slim tool as a clip, you must press the rear buttom and then plug the “mini” USB in the unit in order the program can recognize the internet module, release the buttom when hear a Windows sound and the program shows the next screeshot.

Press to update, on the circle arrows and wait till shows the next screenshot.





When it shows Update successful, Press Eject and unplug the USB from the PC or Laptop. Put the unit in place, plug ethernet cable before you plug the USB in the power supply, after 30 seconds the unit should be ready to use.
